

Dashboard User Guide

Guide for using the operations dashboard to manage daily updates, MV/EGO stations, inventory, orders, station issues, team session planning, data collectors, and reports.

Purpose: This dashboard gives teams one place to view live operations, track station usage, submit updates, manage session plans, log station issues, and review reports. The dashboard keeps MV and EGO separate and organizes work by USA, India, and Philippines.

1. Executive Summary

The dashboard consolidates operational tracking into a single place. It helps teams monitor station availability, daily performance, inventory and order status, planned sessions, station issues, and reports.

The dashboard is organized by country and station type. MV and EGO are tracked separately, and USA, India, and Philippines are separated throughout the main workflows.

2. Problems This Solves

- Reduces switching between multiple dashboards or files.
- Keeps MV and EGO usage separate.
- Shows country-specific status for USA, India, and Philippines.
- Tracks station sessions with Start and End actions.
- Separates station issues from general blockers.
- Supports session planning by station type and country.
- Provides daily and weekly reports for review.

3. Main Dashboard

The main dashboard is the landing page and gives a quick overview of current operations.

Operations Summary

Shows station status: In Use, Idle, Maintenance, and Offline.

Today's Station Performance

Shows completed work, utilization, throughput, and blockers by country.

Weekly Utilization

Shows weekly sessions, completion, and throughput.

Country Summary

Shows team lead, current focus, station status, and sessions today.

4. Daily Updates

Daily Updates is used to submit and review daily team updates. It captures what each team is focused on, what was completed, and what help is needed.

How to submit a daily update

1. Open Daily Updates.
2. Select the team or country.
3. Enter today's focus.
4. Enter completed work.
5. Enter blockers, if any.
6. Enter help needed, if any.
7. Select status.
8. Submit the update.

5. Team Leads

Team Leads is accessed from the Daily Updates page. It is used to set or update team leads for each country.

6. EOD

EOD is used at the end of the day to summarize completed work, pending items, blockers, handoff notes, and tomorrow's plan. EOD history is shown on the same page.

- Completed today
- Pending items
- Blockers

- Handoff notes
- Tomorrow plan
- Status

7. Inventory and Orders

Inventory is used to manage hardware/items across USA, India, and Philippines. Orders are accessed from the Inventory page and track items that need to be ordered or received.

Inventory

Add, edit, delete, search, and filter inventory rows.

Orders

Track quantity, status, vendor, PO number, priority, ETA, owner, and notes.

Hardware Rollout

Track rollout quantities, status, ETA, owner, and notes.

8. MV Stations

MV Stations tracks MV station usage separately from EGO. Users can start and end sessions, track throughput, log issues, and view recent session history.

- USA: 1 MV station
- India: 3 MV stations
- Philippines: 3 MV stations

9. EGO Stations

EGO Stations works similarly to MV Stations but is tracked separately.

- USA: 2 EGO stations
- India: 2 EGO stations
- Philippines: 2 EGO stations

10. Station Issues

Station Issues is used to log and track station-specific problems separately from general blockers.

- Station offline
- Hardware issue
- Software issue
- Calibration issue
- Upload issue

11. Team Session Plan

Team Session Plan is used to plan upcoming sessions. Users select MV or EGO, then select a country, and add rows directly in the table.

Field	Purpose
Team	Team responsible for the session.
Progress	Current progress state.
Action Language	Language or action category.
Object	Object involved in the session.
Action Description / Script	Session script or description.
Seq. Requested	Number of sequences requested.
Seq. Completed	Number of sequences completed.
Session ID	Session identifier.
Calibration ID	Calibration reference.
Data Collectors	People collecting data.
Operators	Operators involved.

12. Data Collectors

The Data Collectors section stores collector names and IDs separately from the session plan table.

- Station Type
- Country
- Collector Name
- Collector ID

13. Reports

Reports provide daily and weekly station performance. Reports can be filtered by All Stations, MV Only, or EGO Only.

- Daily Station Report: Today's station activity by country.
- Weekly Station Report: Weekly station activity by country.
- Station Issue Summary: Open/resolved issues and issue types.
- CSV Exports: Export report data.

14. Manage Today

Manage Today is used to edit or delete records submitted today, such as Daily Updates and EOD reports.

15. Key Metrics Tracked

- Station status: In Use, Idle, Maintenance, Offline
- Completed sessions
- Station utilization
- Throughput
- Open blockers
- Station issues
- Daily and weekly completion rate
- Inventory units and order units by country

16. Recommended Daily Workflow

Morning

1. Open the main dashboard.
2. Check Operations Summary.
3. Check Today's Station Performance.
4. Review Country Summary.

During the day

1. Start MV/EGO sessions.
2. End sessions when complete.

3. Log station issues.
4. Update Team Session Plan.
5. Submit Daily Updates.

End of day

1. Submit EOD report.
2. Review EOD history.
3. Check Reports.
4. Export CSV if needed.

17. Operational Benefits

- Improves visibility across countries and station types.
- Reduces manual tracking of station sessions.
- Keeps MV and EGO reporting separate.
- Makes station issues easier to track and resolve.
- Improves daily and weekly reporting.
- Provides a cleaner planning workflow for upcoming sessions.
